the concept

EuroPlenty stands for "advanced efficiency" – a new business concept developed to provide growers with a single, trusted and sustainable source for all their growing needs.

Our company presents a comprehensive range of high quality products, primarily for the Specialty Agriculture, Ornamental Horticulture, Turf and Landscaping market segments.

The concept of EuroPlenty symbolizes quality, clarity and ease-of-use for growers. The first syllable in the brand name Plenty stands for unique, followed by a second word or syllable that defines the product's principle feature.

In this way, we make all EuroPlenty brand names easy to remember and directly matching to growers' purposes so that it is easier to order the right products.

We know every growing practice has its own specifications, basic requirements and daily routines. That is why we defined our market in three main segments, then we designed EuroPlenty brands to specially meet each segment's requirements.
